                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 5956, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: ARENGENCES. 107196.136
CURRENT FILL OF DATE: 1999-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APLICATION NUMBER: US 60/074,788
PRIOR PLING DATE: 1998-02-18
PRIOR PLING DATE: 1998-02-18
PRIOR APPLICATION NUMBER: US 60/094,190.
NUMBER OF SEG ID NOS: 33142
SEG ID NO 5956

APPLICANT: Marc J. Rubenfield et al.
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS.
TITLE OF INVENTION: AERGINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196-136
CURRENT APPLICATION NUMBER: US/09/252,991A
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR PELLING DATE: 1998-02-18
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR PILING DATE: 1998-07-27
NUMBER OF SEQ ID NOS: 33142
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1055 TGGAGCTGCCTCGGGTTCAAGTGGAGCACGAGGAGTTCACCTGCCACGCTCGGCACC 1114

EVRY was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CCAGGCTGAGCTGGACCCAGAGGGACAGGTTCTGAGCCCCTCCAGCCCTCAGACCCCG 1048

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCWVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                            1334 CCAACAGCTCCCTGAGCCTCCATGGAGGGCTCAGCTCCGGCCTCAGGCTCCGCTGTGAGG 1393

## ALIGNMENTS

This sequence encodes a human obesity protein binding protein-2 homologue (hob-BP2h) of the invention. The hOB-BP2h nucleic acids and polypeptides may be used for the manufacture of a medicament for the treatment of Human obesity protein binding protein-2 homologue; hOB-BP2h; obesity; obesity, related disorder; therapy; ds. Human obesity protein binding protein-2 homologue coding sequence #2. New human obesity protein binding protein-2 homologue nucleic acids, polynucleotides and polypeptides useful for producing medicament for treating obesity and/or obesity-related disorders. Location/Qualifiers
1. .1917

are or obesity and/or obesity-related disorders. The hOB-BP2h nucleic acids a wiseful as probes or amplification primers in the detection, advantification or isolation of gene sequences or transcripts, for recombinant expression of hOB-BP2h polypeptides, as immunogens in the preparation and screening of antibodies, and in sense or antisense suppression of one or more hOB-BP2h genes or nucleic acids, host cell tissue in vivo or in vitro. Antigenic epitope-bearing peptides and polypeptides are useful for raising or screening antibodies that specifically binds to the hOB-BP2h polypeptides

```

This is the nucleotide sequence of an expressed sequence tag (EST) clone that encodes a polypeptide (see AAM81024) which shows close homology cand/or structural similarity (e.g. a conservative amino acid difference) to new human sialoadhesin family 4 (6.8F-4) polypeptide (see AAM81023).

SAF-4 polynucleotides and polypeptides, and methods for producing such colypeptides in transformed host cells using recombinant techniques, are disclosed in transformed host cells using recombinant techniques, are disclosed that enhance or inhibit SAF-4 expression, may be used to treat coloring that enhancement or inhibit in the search of activity. Conditions that may benefit from such treatment include cancer, inflammation, cerebollar degeneration, Alzheimer's disease, Parkinson's disease, multiple sclerosis, amyotrophic lateral sclerosis, head injury canage and other neurological discorders, septic shock, sepsis, stroke, osteoporosis, osteoarthritis, ischemia reperfusion injury, mycoraciala inflammage and other neurological discorders, septic shock, sepsis, stroke, osteoporosis, osteoarthritis, ischemia reperfusion injury, mycoraciala infarction, hypotension, 
Sequence 3099 BP; 770 A; 907 C; 813 G; 607 T; 0 U; 2 Other;

q

polypoptide (see AAWB1023). It can be obtained e.g. from a cDNA library derived from mRNA in cells of human primary dendritic cells using derived from mRNA in cells of human primary dendritic cells using derived from mRNA in cells of human primary dendritic cells using methods for producing such polypeptides by recombinant techniques are disclosed. SAF-4, its agonists and antagonists, and nucleic acid molecules that enhance or inhibit SAF-4 expression, may be used to treat patients in need of enhancement or inhibition of SAF-4 expression or activity. Conditions that may benefit from such treatment include cancer, inflammation, carebellar degeneration, Astheimer's disease, Parkinson's disease, multiple sclerosis, astheimer's disease, Parkinson's disease, multiple sclerosis, amountophic lateral sclerosis, head injury damage and other neurological disorders, septic shock, sepsis, stroke, acceptance of the separativities, ischemia reperfusion injury morardial ö 120 170 180 11:0 disease, kidney disease, liver disease, ischemic injury, myocardial infarction, hypotension, hypertension, AIDS, myelodysplastic syndromes and other haematologic abnormalities, aplastic anaemia, male baldness pattern and bacterial, protozoal, fungal and viral infections related to SAF-4 polypeptide activity Methods of identifying agonists, anatagonists/inhibitors are also provided, as well as diagnostic assays for detecting diseases associated with inappropriate SAF-4 activity or multiple sclerosis, amyotrophic lateral sclerosis; head injury; septic shock; sepsis; stroke; osteoporosis; osteoarchritis; ischemia reperfusion injury; cardiovascular disease; kidney disease; liver disease; myocardial infarction; hypotension; hypertension; AlDS; myelodysplastic syndrome; aplastic anaemia; baldness; infection; ss. (HUMA-) HUMAN GENOME SCI INC

Υ; Wei Kenny JJ, Moore PA, Young PE, Ruben SM, Olsen HS, Greene JM, Ni J,

WPI; 2000-387742/33.

Asolated nucleic acid molecules encoding human secreted proteins are used for the prevention, amelioration and treatment of autoimmune, inflammatory, hyperproliferative and cardiovascular disorders, cancer, wounds, and infectious diseases. P-PSDB; AAB25580

Claim 1; Fig 13A-C; 803pp; English.

AAA80666-A80623 encode the 12 secreted protein sequences given in AAA80666-A80623 encode the 12 secreted protein sequences given in AAA80666-A80623 encode the 12 secreted protein sequences given in AAB25576-E25593. The buman secreted proteins have various activities dependent on the tissues in which they are expressed. Examples of the activities of the proteins include: immunosuppressant; anti-inflammatory; antiatrinitic; antirheumatic, dermatiological; antiproliferative; antiatrinitic; antirheumatic, dermatiological; antiproliferative; and antiatrinitic; anticoner; various disease, antiagonists may be used to treat prevent and/or diagnose various disease, disorders may be used to treat prevent and/or diagnose various disease, disorders may be used to treat prevent and/or diagnose various disease, disorders may be used to treat provent and/or diagnose various disease. Addison's disease, rheumatory disorders e.g. inflammatory bowel disease, cronnary acterioscierosis and myocarditis; hyperproliferative disorders e.g. coronary arteriosclerosis and myocarditis; cancer e.g. melanoma and lymphoma. The proteins and polymucleotide sequences may also be used in wound healing and the treatment of infectious diseases. The human secreted protein gene #5 and protein sequences are represented in sequences AAA806610 and AAA806580. Sequences are represent genes related to the present invention relates to 12 secreted human proteins and the secreted protein gene#5

The invention relates to an isolated nucleic molecule that is at least SX The invention relates to an isolated nucleic molecule that is at least SX dentical to 18 human cDNA sequences representing 12 novel genes according secreted proteins or a polynucleotide fragment of the cDNA sequence contained in American Type Culture Collection (ATC) deposit No. defined in the specification, its species homologue, a variant or allelic variant of the polynucleotide having a polynucleotide capable of hybridise under stringent conditions to a nucleic acid molecule conditions to a nucleic acid molecule capable of having a polyperide sequence of any A or T residues. Also included are recombinant vectors, host cells (for producing the polypeptide), the secreted polypeptide fragment, domain, epitope, it is alleast 95% identical to a polypeptide fragment, domain, epitope, it is included are recombinant vectors, not the polypeptide fragment, domain, epitope, it is consistent and polypeptide fragment, domain, epitope, it is included are specifically bind to the polypeptides, diagnosing, treating, preventing or ameliorating a medical condition by administering the polynucleotide or the polypeptides, diagnosing, treating, preventing specifically propertied, the gene corresponding to the cDNA sequence and activity, in a biological assay (by expressing the polynucleotide or dientifying an activity). The polypeptides, moleic acids and antibodies are useful for diagnosing a pathological condition, such as cancer, inflammation or a susceptibility to a pathological condition, such as cancer, inflammation and other immune disorders, nucrological and blood clotting disorders (many axamples are restriction mapping). The polypeptides and antibodical condition, such as cancer, inflammation and other immune restriction, radiation hybrid mapping or long-range restriction mapping). The polypeptides and antibodication of the restriction mapping the polypeptides and antibodication of the restriction mapping the polypeptides and antibodication of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            297
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  780
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       840
                             The invention relates to an isolated nucleic acid sequence, or its stalelic variant, a fragment of the cDNA sequence, or its fragment domain, epitope or species homologue. The nucleic acid is useful for preparing a medicament for preventing, treating or ameliorating a medical condition e.g., cancer, liver discorders such as hepatitis or neural disorders such as Albheimer's disease. The present sequence represents cDNA encoding a novel human secreted protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            600

The invention relates to an isolated SIGLEC (stalic acid-binding Igrelated lectin) protein (I). Pharmaceutical compositions comprising (I) related lectin) protein (I). Pharmaceutical compositions comprising (I) are useful for treating immune system diseases such as asthma, leukaemia or other allergic or inflammatory diseases. Extracellular domains of (I) to passays, and imaging methods. (I) is useful as a target for drugs which inhibit inflammation, tissue damage and remodeling in asthma, and inhibit inflammation, tissue damage and remodeling in asthma, and inflammatory diseases such as allergic rhinitis, osteoarthritis, Crohn's inhibit inflammation diseases such as allergic rhinitis, osteoarthritis, Crohn's inflammatory diseases such as allergic rhinitis, osteoarthritis, also useful for monitoring the course of disease or disorders, and for identifying agents that bind with and/or modulate the biological activity of SIGLEC-BMS proteins methods, and to detect the presence and/or amount of SIGLEC-BMS nucleotide sequences and/or SIGLEC-BMS on biological sample. (II) are useful as nucleic acid probes are useful for screening genomic library to isolate a genomic clone of SIGLEC-BMS antibodies associated with SIGLEC-BMS transcripts or proteins. The SIGLEC-BMS antibodies are also useful sequences and PCR primers of SIGLEC-BMS proteins and in diagnostic imaging technology. Novel isolated SIGLEC (sialic acid-binding Ig-related lectin) protein molecules useful for treating immune system diseases such as asthma, weukemia, allergic rhinitis, psoriasis, conjunctivitis, Crohn's disease.

The invention relates to an isolated SIGLEC (sialic acid-binding Igrelated lectin) protein (I). Pharmaceutical compositions comprising (I) are useful for treating immune system diseases such as asthma, leukaemia or other allergic or inflammatory diseases. Extracellular domains of (I) represent potential markers for screening, diagnosis, prognosis, follow-companys, and imaging methods. (I) is useful as a target for drugs which inflammation, tissue damage and indicated in asthma, and continuity diseases such as allegic rhinitis, osteoarthritis, crohn's disease, psoriasis, rheumatoid arthritis, conjunctivitis, etc. (I) is also useful for monitoring the course of disease or disorders, and for identifying agents that bind with and/or modulate the biological activity of SIGLEC-BMS proteins. The nucleic acid molecules (II) encoding (I) are useful in diagnosis and/or prognosis methods, and to detect the presence and/or amount of SIGLEC-BMS nucleotide sequences and/or SIGLEC-BMS can be useful as mucleic acid molecules (II) are useful and biological sample. (II) are useful as mucleic acid probes or signed sample of signed some one of signed some one of signed some one of signed signed signed to detect, sort or isolate cells expressing SIGLEC-BMS proteins and in diagnostic imaging bechnology.

The invention relates to an isolated SIGLEC (stalic acid-binding Igrelated lectin) protein (I). Pharmaceutical compositions comprising (I) are inseful for treating immune system diseases such as asthma, lenksemia or other allergic or inflammatory diseases. Extracellular domains of (I) represent potential markers for screening diagnosis, prognosis, following inflammation, tissue dama end remodeling in asthma, and inaging methods. (I) is useful as a target for drugs which inhibit inflammation, tissue dama end remodeling in asthma, continctivities, croin as allergic rhinitis, osteoarthritis, Crohn's disease, psoriasis, rheumatorid arthritis, conjunctivitis, etc. (I) is also useful for monitoring the course of disease or disorders, and for identifying agents that bind with and/or modulate the biological activity of SIGLEC-BMS proteins. The nucleic acid molecules (II) encoding (I) are useful in diagnosis and/or prognosis methods, and to detect the presence and/or amount of SIGLEC-BMS nuclectide sequences and/or signed as signed as sample. (II) are useful as nucleic acid probes or secening genomic library to isolate a genomic clone of SIGLEC gene. SIGLEC-BMS nucleic BMS transcripts or proteins. The SIGLEC-BMS antibodies are also used to detect, sort or isolate cells expressing SIGLEC-BMS proteins and in diagnostic imaging technology.

ABRA\$336-ABR\$4318 represent human SIGLEC coding sequences and PCR primers leukemia, allergic rhinitis, psoriasis, conjunctivitis, Crohn's disease. Example 11; Fig 6; 209pp; English

received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic factors, univial factors, differentiation factors, convival factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a tumour in a mammal: In addition, they may be useful for measuring or detecting the expression of a tumour associated gene. The present sequence is a cDMA sequence which encodes a human PRO protein of the

This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information

The present invention relates to PRO proteins and their coding sequences.

The PRO proteins are useful for diagnosing and treating a B cell related disorder, e.g. X-linked infantile hypogammaglobulinemia, polysaccharide antigen unresponsiveness, selective IgA deficiency, selective IgM deficiency, selective deficiency of IgG subclasses, immunodeficiency with hyper IgM, transient hypogammaglobulinemia of infancy, Burkit's comparemediate lymphoma, intermediate lymphoma, tollicular lymphoma, tropermediate lymphoma, tollicular lymphoma, topermediated haemolytic hypersensitivity, rheumatoid arthritis, autoimmune mediated haemolytic andemia, myasthenia gravis, hypoadrenocorticism, glomerulonephritis, or ankylosing spondyiltis. The PRO proteins are also useful for preparing a condition that is responsive to the PRO protein, e.g. cancer or immune-mediated inflammatory diseases. The PRO coding sequences are useful as hybridization probes in chromosome and commapping, in preparing PRO proteins, or in generating transgenic animals or knockout animals, which in turn are useful in the development and screening of therapeutically useful reagents.
   AGCCAAGAGGAGCTCCATTATGCCACGCTCAACTTCCCAGGCGTCAGACCCAGGCCTGAG 2077

```
in a biological assay and identifying the protein in the supernatant having the activity). The polypeptides, nucleic acids and antibodies are useful for diagnosting a pathological condition or a susceptibility to a pathological condition, for preventing, treating, or ameliorating a medical condition, such as cancer, inflammation and other immune disorders, neurological and blood dotting disorders (many examples are given in the specification). The nucleic acids are also useful for chromosome identification, radiation hybrid mapping or long-range restriction mapping. The polypeptides and antibodies are useful for providing immunological probes for differential identification of the tissues immunolistcohemistry assays. The polypeptide, polynucleotide, agonist or antagonist may also be used as a food additive or preservative to increase or decrease storage capabilities, fat content or other nutritional components. The present is a secreted protein cDNA of the

   The invention relates to an isolated nucleic molecule that is at least 55% identical to 18 human cDNA sequences representing 12 novel genes encoding secreted proteins or a polymucleotide fragment of the cDNA sequence contained in American Type Culture Collection (ATCC) deposit No. defined in the specification, its species homologue, a variant or allelic variant of the polymucleotide having a polymucleotide capable of having a nucleotide sequence of only A or T residues. Also included are recombinant vectors, host cells (for producing the polympetide), the recombinant vectors, host cells (for producing the polympetide), the secreted polypeptide (comprising a sequence that is at least 95% certed polypeptide fragment, domain, epitope, full-length protein, variant, allelic variant or species homologue), antibodies that specifically bind to the polypeptides, diagnosing, treating, preventing or amplicating a medical condition by administering the polymucleotide cor the polypeptide. The gene corresponding to the cDNA sequence and identifying an activity in a biological assay (by expressing the cDNA sequence in a cell, isolating the supernatant, and detecting an activity
  New human secreted nucleic acid molecules and polypeptides, useful for preventing, treating, or ameliorating a medical condition, such as cancer, inflammation, immune disorders, neurological and blood clotting

ic acids encoding signal transduction pathway component ul for diagnosing, treating, and/or preventing cancer, infections, cardiovascular and inflammatory

66; 554pp; English.

The invention relates to an isolated nucleic acid molecule (CDNA) encoding a human secreted protein, representing one of 85 novel genes. Also included are recombinant vectors, host cells (expressing the protein), the secreted proteins (including their fragments, epitopes and diagnosing a pathological condition or susceptibility to the protein, of appropriating a pathological condition or susceptibility to a pathological condition (comprising determining the presence or absence of a mutation in the nucleic acid and diagnosing a condition based on the presence or susceptibility to a pathological condition of comprising determining the presence or amount of expression of the protein in a biological sample and diagnosing a condition based on the presence or amount of expression

```
the protein), preventing, treating or ameliorating a medical condition by administering the nucleic acid or protein to a mammalian subject, identifying a binding partner to the protein, the gene corresponding to the cDNA sequence, and identifying an activity in a biological assay (comprising expressing the nucleic acid in a cell, isolating the supernatant, detecting an activity in a biological assay and identifying the protein in the supernatant having the activity. The nucleic acids and proteins display the following activities Cytostatic, antibacterial, virucide, Neuroprotective, Gynaecological, Gastrointestinal-Gen, Virucide, Neuroprotective, Gynaecological, Gastrointestinal-Gen, Cardiovascular-Gen, Nephrotropic, Antiallar-Gen, Respiratory-Gen, Immunosuppressive, Cerebroprotective, Vasotropic, Notropic, Antiallergic. The methods and compositions of the present incomposition disorders related to the novel polypeptides, such as cancer, bacterial or viral infections, and neural, immune system, blood, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, creating inflammatory or proliferative disorders (many examples of these diseases and disorders are given in the specification). The present sequence encodes a novel secreted protein of the invention.

Novel isolated SIGLEC (sialic acid-binding Ig-related lectin) protein molecules useful for treating immune system diseases such as asthma, leukemia, allergic rhinitis, psoriasis, conjunctivitis, Crohn's disease.

Claim 11; Fig 4A; 209pp; English.

The invention relates to an isolated SIGLEC (stalic acid-binding Igrelated lectin) protein (I). Pharmaceutical compositions comprising (I) are useful for treating immune system diseases such as asthma, leukaemia or other allergic or inflammatory diseases. Extracellular domains of (I) represent potential markers for screening, diagnosis, prognosis, follow-up assays, and imaging methods. (I) is useful as a target for drugs which inhibit inflammation, tissue damage and remodeling in asthma, and inflammatory diseases such as allergic rhinitis, osteoarthritis, Crohn's disease, psoriasis, rheumatoid arthritis, conjunctivitis, etc. (I) is also useful for monitoring the course of disease or disorders, and for identifying agents that bind with and/or modulate the biological activity of SIGLEC-BMS proteins. The nucleoide sequences and/or SIGLEC-BMS and/or amount of SIGLEC-BMS nucleotide sequences and/or SIGLEC-BMS ABSOLT 14

The invention relates to an isolated SIGLEC (sialic acid-binding Igrelated lectin) protein (I). Pharmaceutical compositions comprising (I) are useful for treating immune system diseases such a sathmain, leukaemia or other allergic or inflammatory diseases. Extracellular domains of (I) represent potential markers for screening, diagnosis, prognosis, following asserts, psoriases such as allergic rinitis, or drugs which inflammatory diseases such as allergic rhinitis, osteoarthritis, crohn's disease, psoriasis, rheumatoid arthritis, conjunctivitis, etc. (I) is also useful for monitoring the course of disease or disorders, and for identifying agents that bind with and/or modulate the biological activity or SigLEC-BMS proteins. The nucleic acid molecules (II) encoding (I) are useful in diagnosis and/or prognosis methods, and to detect the presence and/or amount of SigLEC-BMS nucleotide sequences and/or SigLEC-BMS care useful as mucleic acid probes are useful for screening genomic library to isolate a genomic clone of SigLEC-BMS antibodies are also useful as mucleic acid probes of sigLEC-BMS suithodies are also useful as mucleic calls expressing SigLEC-BMS proteins and in diagnostic imaging technology.

The SIGLEC-BMS antibodies are also used to detect, sort or isolate cells expressing SigLEC-BMS proteins and in diagnostic imaging technology.

masked by cis interactions with sialic acids on the same ceîl surface. In the immune response, may act as an inhibitory receptor upon ligand induced tyrosine phosphorylation by recruiting cytoplasmic phosphatases(s) via their SH2 domain(s) that block signal transduction through dephosphorylation of signaling and mouse cDNA sequences.";
Proc. Natl. Acad. Sci. U.S.A. 99:16899-16903(2002).
-!- FUNCTION: Putative adhesion molecule that mediates sialic-acid
dependent binding to cells. Preferentially binds to alpha2.3- or
2,6-linked sialic acid. The sialic acid recognition site may be molecules.

SUBCELLULAR LOCATION: Type I membrane protein (isoforms 1-4); secreted (isoform 5).
ALTERNATIVE PRODUCTS: SUBUNIT: Interacts with PTPN6/SHP-1 upon phosphorylation. Event=Alternative splicing; Named isoforms=5;

IsoId=Q96LC7-2; Sequence=VSP\_002565; Name=3; Synonyms=Sv3; IsoId=Q96LC7-3; Sequence=VSP\_002564; IsoId=Q96LC7-1; Sequence=Displayed; Name=2, Synonyms=Short, Sv1

Name=4; Synonyms=Sv4;
IsoId=096LC7-4; Sequence=VSP\_002561;
Name=5; Synonyms=Sv2;
Name=5; Synonyms=Sv2;
IsoId=096LC7-5; Sequence=VSP\_002562, VSP\_002563;
TISSUE SPECIFICITY: Expressed by peripheral blood leukocytes
feosinophils, monocytes and a natural killer cell subpopulation).
Isoform 5 is found to be the most abundant isoform. Found in lymph node, lung, ovary and appendix. Isoform 1 is found at high levels and isoform 2 at lower levels in bone marrow, spleen and spinal

chord. Isoform 2 is also found in brain. Isoform 4 is specifically bound in natural killer cells.

DOMAIN: Contains 1 copy of a cytoplasmic motif that is referred to as the immunoreceptor tyrosine-based inhibitor motif (ITIM). This motif is involved in modulation of cellular responses. The phosphorylated ITIM motif can bind the SH2 domain of several SH2-containing phosphatases.

This SWISS-PROT entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation --!- PTM: Phosphorylation of Tyr-667 is involved in binding to PTPN6.
-!- SIMILARITY: Belongs to the immunoglobulin superfamily. SIGLEC (sialic acid binding Ig-like lectin) family.
-!- SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.
-!- SIMILARITY: Contains 1 immunoglobulin-like V-type domains.

   Isoid=Q96RL6-2; Sequence=VSP_008764; ISSUE SPECIFICITY: Expressed by macrophages in various tissues including Kupffer cells. Also found in brain microglia. DOMAIN: Contains 1 copy of a cytoplasmic motif that is referred to as the imminoreceptor tyrosine-based inhibitor motif (ITIM). This motif is involved in modulation of cellular responses. The phosphorylated ITIM motif can bind the SH2 domain of several SH2-
                                     SEQUENCE FROM N.A. (ISOFORM 1), AND INTERACTION WITH PTPN6 AND PTPN11. MEDLINE=22086217; PubMed=11986327; DOI=10.1074/jbc.M202833200; Angata T., Kerr S.C., Greaves D.R., Varki N.M., Crocker P.R.,
  essed by
  "Cloning and characterization of human Siglec-11. A recently evolv
signaling that can interact with SHP-1 and SHP-2 and is expressed
tissue macrophages, including brain microglia.";
J. Biol. Chem. 277:24466-24474 (2002).
   Containing phosphatases.

PTM: Phosphorylated on tyrosine residues.

SIMILARITY: Belongs to the immunoglobulin superfamily. SIGLEC (sialic acid binding Ig-limite lectin) family.

SIMILARITY: Contains 3 immunoglobulin-like C2-type domains.

SIMILARITY: Contains 1 immunoglobulin-like V-type domains.

   S
  Isoid-gonvz4-3; Sequence=VSP_002560;
-:- TISSUB SPECIFICITY: Expressed specifically on eosinophils.
-:- DOMAIN: Contains 1 copy of a cytoplasmic motif that is referred to as the immunoreceptor tyrosine-based inhibitor motif (ITIM). This motif is involved in modulation of cellular responses. The phosphorylated ITIM motif can bind the SH2 domain of several SH2-
"Siglec-8. A novel eosinophil-specific member of the immunoglobulin
  Floyd H., Zhang J.O., Crocker P.R.; Submitted (OCT-2000) to the EMBL/GenBank/DDBJ databases.

-I-FUNCTION: Putative adhesion molecule that mediates sialic-acid dependent binding to cells. Preferentially binds to alpha2.3-linked stalic acid. Also binds to alpha2.6-linked sialic acid recognition site may be masked by cis interactions with sialic acids on the same cell surface.

-I-SUBCELDUTAR LOCATION: Type I membrane protein.
  Sialic acid binding Ig-like lectin 8. Extracellular (Potential).
   containing phosphatases.
--- SIMITARITY: Belongs to the immunoglobulin superfamily. SIGLEC (stalic acid binding 19-like lectin) family.
--- SIMITARITY: Contains 2 immunoglobulin-like C2-type domains.
--- SIMITARITY: Contains 1 immunoglobulin-like V-type domain.

"The secreted protein discovery initiative (SPDI), a large-scale effort to identify novel human secreted and transmembrane proteins: a bioinformatics assessment.";
  Name=Short; Synonyms=SiG-8; Isole-8: Specific Synonyms=SiG-8; Sequence=SNS POSS66; A specific Structure and sole of the short isoleom, it is lower expressed in spleen, small intestine and adrenal gland; it is lower expressed in thyroid, placenta, brain, stomach, bone marrow, spinal chord and beast. The long isoform is highly expressed in spleen, small intestine and bone marrow; it is lower expressed in thyroid,
   DOMAIN: Contains 1 copy of a cytoplasmic motif that is referred to as the immunoreceptor tyrosine-based inhibitor motif (ITIM). This motif is involved in modulation of cellular responses. The phosphorylated ITIM motif can bind the SH2 domain of several SH2-
